THE STORY

MADE FOR ME

[FRANK'S CHALLENGE]

Operating with 150 dairy cows and 100 bulls, my base feed and other feed components vary greatly. I need to be able to rely on mixing equipment that is a perfect fit for me and my requirements on site. A task of truly "large" proportions: My newly constructed building can accommodate any mixer wagon, but my existing lower barns can not.

Is there a solution MADE FOR ME?

[OUR SOLUTION]

Great in every detail and as large as it needs to be: Our mixer wagons of the V-MIX series will adapt to any requirement you can throw at it. Taller, wider, deeper or narrower.

Tell us what you need, and we will offer you a solution that will fit your needs perfectly.

Our extensive product range and the countless equipment options makes it a breeze for us to prepare a solution that it is tailored to your own specific requirements.

We always do so without cutting any corners – especially when it comes to the mixing quality. Let us know what you need to mix, and we will take care of it. Whether it be long-fibered, short-cut, dry or wet feed or whether you work with bales, solid silage or other types of material.

We have the necessary know-how: The perfect mix for your animals!

Our goal is to help you boost your efficiency... !

THIS SOLUTION IS SPECIALLY MADE FOR FRANK!

We have made Frank's challenge our own.

This is the principle that drives at BvL: We work in close cooperation with farmers around the world in a bid to constantly improve and customize our modular feeding equipment to individual requirements. This personal collaboration and exchange allows us to develop versatile machinery solutions that match the goals, the animal stock, the feed mixes, the barn configurations and the machinery pools found in agriculture perfectly – solutions that are sustainable and future-proof.

FOR FARMERS LIKE FRANK. FOR FARMERS LIKE YOU.

We will find the solution that fits you best as well.

Serving as the foundation for your solution is our versatile V-MIX series with its external loaders and self-loaders as well as its self-propelled and stationary mixers – all of which have been tried and tested and constantly optimized for decades. The centerpiece of this solution is its customization: We will team up with you to analyze your requirements and configure a mixer wagon that fits your needs to a T. Our standard is to make your work easier and more efficient – with a customized solution of which you can safely say:

BvL CRAFTED THIS ESPECIALLY FOR ME.

OUR DAILY MISSION – THE BEST SUPPORT FOR YOUR BUSINESS

You work hard every day to produce the best food possible.

Monday, Tuesday, Wednesday, rain or shine, Thursday, Friday, summer or winter, Saturday, Sunday, from dusk till dawn – you do your utmost day in and day out to guarantee premium foods and healthy animals. You need a partner that is as hands-on as you are and thinks and feels like you do. You need a partner like BvL.

We work for you every day!

We are a family-owned-and-operated company and have been working for and with farming businesses around the world since 1860. Over the course of more than 160 years, generations of bright minds have done groundbreaking work for the industry and turned BvL into a leading partner for highly advanced feeding equipment and bedding technology.

We are familiar with the challenges and developments of the industry – and always stay a few steps ahead of them to preserve our ability to make animal husbandry and farming simpler, safer and more efficient. The tremendous trust many farmers place in our solutions gives us a sense of responsibility and the drive to do our best every day.

[**MADE IN GERMANY**]

since
[**1860**]

Made in Germany

Engineering and producing at our home site in Emsbüren in the Emsland region, we can rely on a great level of vertical integration and a staff of our own experienced employees. The modular and customizable configuration is part of the concept we have devised to deliver powerful and made-to-order products that are on the cutting edge and at your side every day.

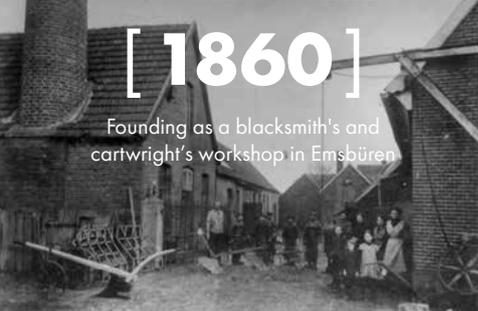

Our objective: Farming that is safe for man and animal alike.

Made for the future

We live and breathe sustainability on all levels: We always act with reason in matters of business and the environment – with long-lasting and energy-efficient equipment that helps conserve resources. Employing networked technology, we rely on smart digital management systems that are capable of protecting base feed stocks and guaranteeing safety.

Our objective: Sustainable handling of resources and the environment.

**WE ARE BvL.
INNOVATION. EXPERIENCE. STRENGTH.**

Manufacture of the first vertical mixer

[V-MIX EXTERNAL LOADER]

THE TRAILED AND HIGHLY VERSATILE MIXER WAGON

Wide selection of mixers for all types of applications

Every business has their own specific herd structure. What is more, no farmyard gate and no barn alley is like the other. To find the best solution for your feedings, you can pick your mixer wagon from an exhaustive selection of base models.

Heart and hull as required

One fundamental feature that sets apart the different sizes is the number of augers that create the perfect mixture on the inside of the wagon. What is more, the mixing vessels can be built with a slimmer or flatter design – just as needed.

[78]

Basic types

[37]

Versions

[2,886]

Combinations

All mixer wagons made by BvL are equipped to mix tremendous amounts of feed thanks to their remarkable volume utilization and deliver the feed in the tightest of spaces.

One of a kind in terms of both size and equipment

The mixer wagons of the V-MIX series boast a capacity between 3.5 m³ and 46 m³. Thanks to the wide variety of equipment options, ranging from the V-MIX Agilo to the V-MIX Giant, all mixer wagons can be customized to satisfy your individual requirements.

V-MIX AT A GLANCE

V-MIX AGILO 3.5 AND 5-1S

SINGLE-AUGER MIXER

V-MIX PLUS 6.5 TO 14-1S

SINGLE-AUGER MIXER

V-MIX PLUS T 6.5 TO 12-1S

SINGLE-AUGER MIXER

V-MIX PLUS 13 TO 30-2S

TWO-AUGER MIXER

V-MIX PLUS 25 TO 40-3S

TRIPLE-AUGER MIXER

V-MIX GIANT 40 AND 46-3S

TRIPLE-AUGER MIXER

V-MIX AGILO 3.5 AND 5-1S

SINGLE-AUGER MIXER

Compact, yet fully featured mixer wagon that supports all equipment options

Small and maneuverable – these are the distinguishing features of our smallest trailed mixer wagon, the V-MIX Agilo. Combining a capacity of 3.5 m³ or 5 m³ with a compact form factor, this mixer wagon with a single auger will fit into any

barn and reduce your workload tremendously. As an added bonus, our smallest mixer wagon can also be equipped with a conveyor belt.

Additional information:

V-MIX PLUS T 6.5 TO 12-1S

SINGLE-AUGER MIXER

Height-reduced mixer wagon for low-clearance passageways

Lowered in height – also an option at BvL: The V-MIX Plus T is distinguished by an extremely low overall height (starting at 2.15 m), which is made possible by positioning the mixing vessel between axle and drawbar. This feature makes this mix-

er wagon especially well-suited for low door entries – and allows for combination with a loading vehicle that has a low loading height.

Additional information:

V-MIX GIANT 40 AND 46-3S

TRIPLE-AUGER MIXER

The giant among BvL's mixer wagons

A fill quantity of 40 to 46 m³ – that is enough to feed approx. 400 cows. The V-MIX Giant series owes this performance to its standard BvL Powershift gearbox. This gearbox is a reduction gear with integral hydraulic clutch that allows the

operator to start the mixer wagon in a low gear and shift to maximum mixing speed under load. This reduces the required power significantly – especially during startup – and eases the load on the entire drive train to a tremendous degree.

Additional information:

[THE RIGHT MIXING AUGER]

THE HEART OF THE BvL MIXER WAGON

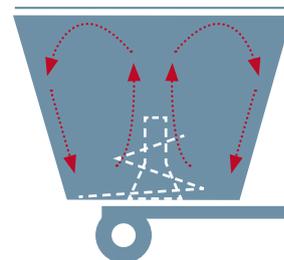

Mixing made easy

Forming the core of the mixer wagon, the mixing auger is always the main focus of our further development. In line with your specific feeding philosophy and requirements, we will outfit your mixer wagon with the type of mixing auger that is best suited to deliver a perfect mixing result. All mixing augers are marked by a mixing process that is energy-saving and gentle on the structure of the feed.

Custom-made design

Adjusting the knives is not the only way to optimally adjust the mixing auger to the various types of feed. If necessary, you can also add the following options to further optimize its performance: Hard surfacing, guide shear, different types of knives, catch magnets, and much more.

HIGH VOLUME UTILIZATION

The mixing auger is always matched perfectly with the mixing hopper. This guarantees high volume utilization at a power requirement that is as low as possible. The mixing auger is as small as possible, but as large as necessary. This helps save time and money.

MADE ESPECIALLY FOR ME.

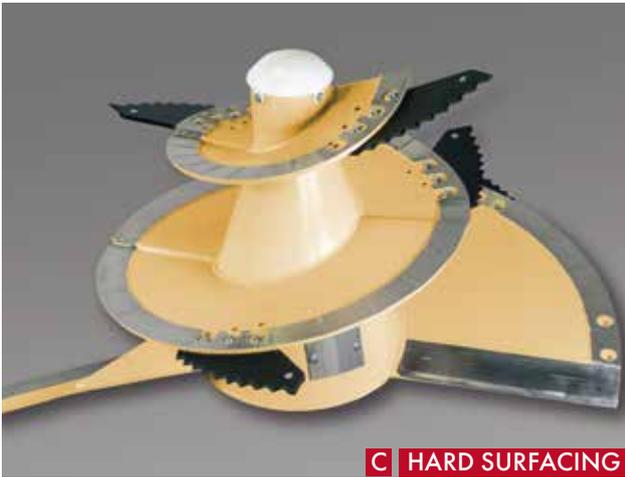

EQUIPMENT CUSTOMIZED FOR YOUR MIXING AUGER

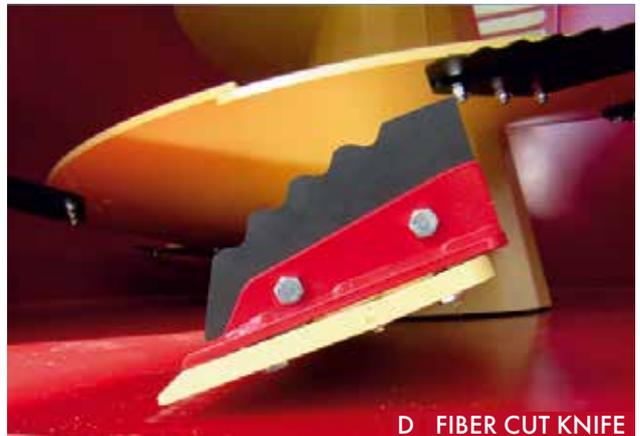

A CATCH MAGNET

B GUIDE SHEAR

C HARD SURFACING

D FIBER CUT KNIFE

E AUGER SEAL

A CATCH MAGNET Whether it is nails, barbed wire or other parts of iron – our HD magnet will catch any harmful foreign objects at the beginning of the auger. **B** GUIDE SHEAR The guide shear provides for clean walls and allows new feed to drop down properly, even when handling demanding rations. **C** HARD SURFACING Effective mixing requires a rectangular edge on the outside of the flight. The hard surfacing made of V2A provides for a powerful upward movement and fast mixing. **D** FIBER CUT KNIFE Installed at the discharge arm of the mixing auger, the patented Fiber Cut knife ensures that the feed is discharged smoothly and clears the path even if the feed is composed of long-fiber straw or grass. **E** AUGER SEAL The additional auger seal on the gearbox keeps remaining feed from entering the auger taper.

YOUR SELECTION OPTIONS

Catch magnet

Guide shear

V2A hard surfacing – mixing auger (B = 100 mm)

Fiber Cut knife

Auger seal

THE AUGER OPTIONS

We will always equip your mixer wagon with the best-matching mixing auger that will allow you to achieve the best result possible. For extreme applications or use

cases that are particularly demanding, we can also supply you with special, custom-designed mixing augers.

The flights and the size of the auger used in your mixer wagon will always be optimized specifically to the type of hopper built into the wagon. Only if the ratio of hopper height and mixing auger geometry is perfect will you reach mixing results of the highest order: fast, energy-saving,

[1.5 – 3.0]

Flights depending on hopper height

and gentle on the structure! All three auger options are suitable for universal use in all versions of the mixer wagon and are set apart by their characteristic, well-centered mixing process that provides for the highest feed quality possible.

A BASIC MIXING AUGER

B POWER MIXING AUGER

C COMPACT FEEDING MIXING AUGER

A BASIC MIXING AUGER Long years of experience and continuous advancement have made the Basic mixing auger the all-rounder in our portfolio. This is the mixing auger we incorporate as the standard option and that will master most applications with flying colors. It is particularly well-suited for quickly converting normal to moist TMRs and round bales into a homogeneous mixture. **B POWER MIXING AUGER** If the mixed ration is particularly dry and long-fibered, the special notch in the Power mixing auger will provide for an even swifter flow of material. This "TS Cracker" allows the feed to drop down with even greater efficiency. The Power mixing auger is equally ideal for feeding round bales. **C COMPACT FEEDING MIXING AUGER** The Compact Feeding mixing auger comes into play whenever feed preparation involves a water-heavy mixture or free-flowing material. The wide flights of this mixing auger transport the feed to the top with great power and provide for an optimum mix.

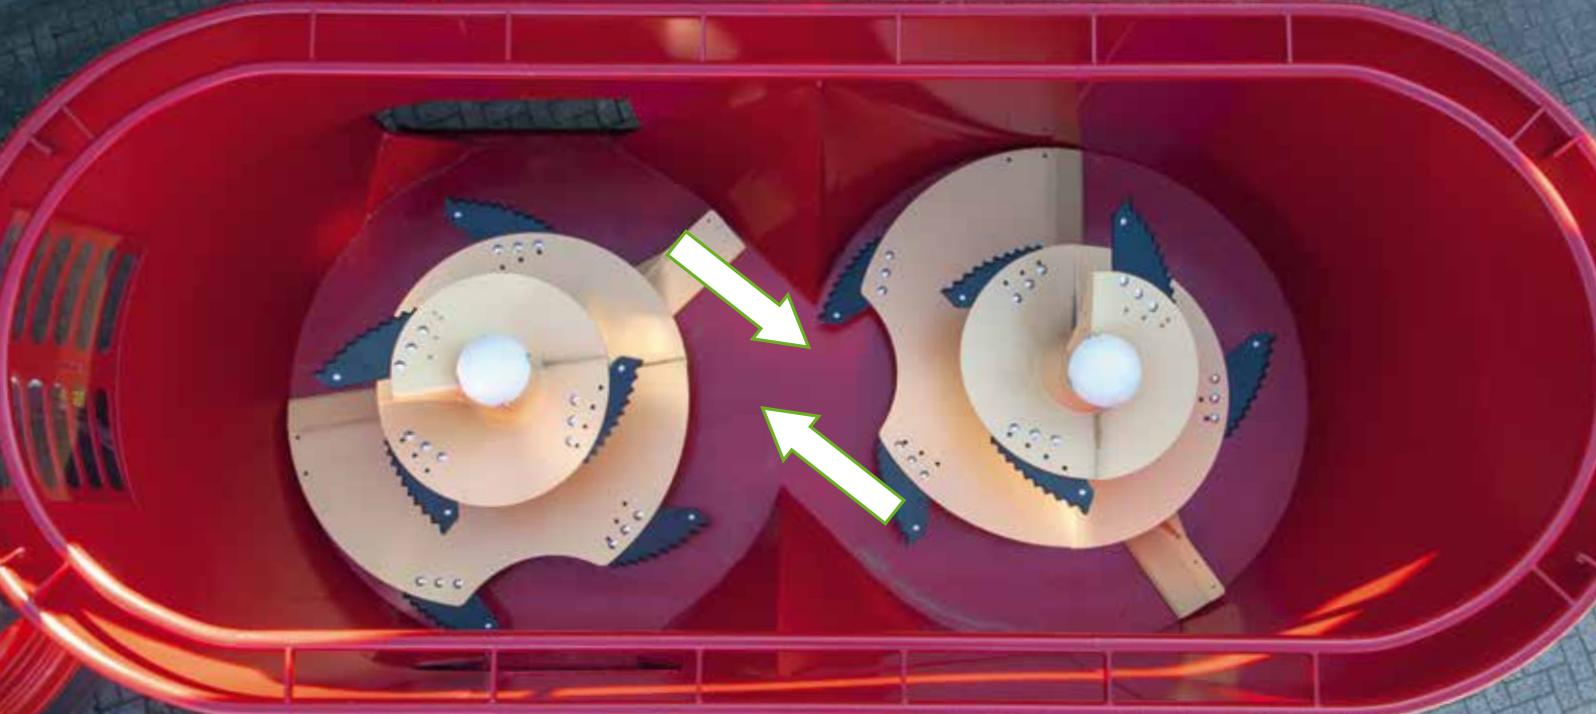

YOUR SELECTION OPTIONS

Basic mixing auger

Power mixing auger

Compact Feeding mixing auger

[THE OPTIMUM MIXING CHAMBER]

FEED PERFECTLY BLENDED FOR YOUR ANIMALS

The right mix

A feed mixture of high quality forms an elementary basis for the well-being and the performance of your animals. Your animals will thank you for the effort you invest in this area with a higher feed intake and greater performance. Only if you use excellent mixing tools and match them with the right mixing augers will you be able to produce feed mixes of high quality.

The mixing process

The asymmetrically arranged mixing wedges in the mixing hopper of mixer wagons that are equipped with two or three mixing augers provide for an ideal exchange of feed between the individual mixing chambers. This arrangement combines an optimized flow of material with a high degree of volume utilization and a lower power requirement.

Rolled container walls

Since they have been rolled, the container walls do not present an obstacle to the mixing process. They thus provide for a smooth and swift mixing process, causing minimum wear on the material. You can choose the degree to which you wish the feed to be cut by adjusting the knives found on the mixing auger and the counter blade inside the hopper.

V-CONNECT MIXER CONTROL

"Time is money": The Mixer Control allows you to stay firmly in control of many things that are going on in your mixer wagon. Keep an eye on your time and cost so that you can prepare a reproducible mixture day in and day out.

→ Mixing time

→ Mixing auger speed

→ Number of mixing auger revolutions

MADE ESPECIALLY FOR ME.

YOUR SELECTION OPTIONS

V-CONNECT Mixer Control

[PATENTED DISCHARGE SYSTEMS]

WITH A LARGE VARIETY OF DISCHARGE OPTIONS

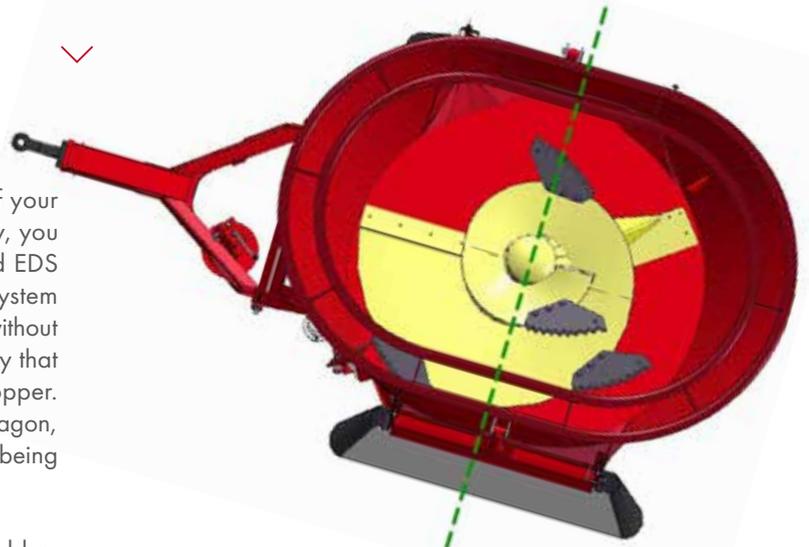

Uniform distribution

Let justice reign at the feed table. To ensure that all of your animals will receive their fair share of the feed quantity, you can opt to equip our mixer wagons with the patented EDS system (Exact Dosing System). This is because the system provides for an extremely consistent discharge – even without a conveyor belt. The side doors are arranged in a way that positions them asymmetrically to the center of the hopper. Coming out at the widest point on the side of the mixer wagon, the feed is deposited in a loose swathe, keeping it from being driven over.

Dosing the quantity being discharged, the patented rubber bellows on the EDS door minimize the risk of injury for both people and animals.

Boasting a width of 1,100 mm, the doors we offer come in a size that is second to none, ensuring that your feed will always be discharged with no blockage and in a large swathe.

It is possible to arrange the EDS doors all around the mixer. Another option we offer besides the EDS doors is to install cross conveyors at the front and even the rear of the mixer wagon – depending on the arrangement you require. The equipment options available for the individual doors are manifold.

[1, 100 mm]

Door

Comprehensive equipment options

The doors can be paired with a large variety of optional accessories such as feeding chutes that pivot up or down, rubber lips or side elevators that measure between 600 and 2,250 mm and extend the discharge range of the doors. Depending on your use case, you may also find that the spring-supported fiber door or the "HARDOX" cutting edge are useful complements to your door.

[CHASSIS]

THE SOLID FOUNDATION FOR YOUR MIXER WAGON

Rugged frame construction

All mixer wagons are mounted on a separate chassis. This design allows the chassis to absorb the forces emitted from the ground, keeping them from being directly transmitted to the mixing vessel.

AXLE SYSTEMS

- Single axle
 - 12 t spring single axle system
 - 16 t spring tandem axle system
 - 24 t spring tandem axle system with or without trailing axle
- 24 t spring tandem axle system with positive steering
 - 30 t spring tridem axle system with trailing axles
 - 30 t spring tridem axle system with positive steering
 - 30 t pendulum tandem axle system
 - 36 t spring tridem axle system with trailing axles
 - 36 t spring tridem axle system with positive steering

The mixing vessel incorporated in the V-MIX Plus and the Giant series is held in place by 4 to 6 load cells. This arrangement ensures that the load cells on these chassis deliver weight measurements with extreme accuracy and that they are subjected to a uniform load in cases where the terrain is not exactly even. As the mixing vessel is mounted on a separate chassis, it is also possible to use a back-up battery to take precise measurements when the wagon is unhitched.

To meet your specific requirements, we can equip the chassis with a variety of axle systems.

 Road travel 25 km/h

 Road travel 40 km/h

RAISED ANTI-SPILL RING

[ANTI-SPILL RING AND ATTACHMENTS]

THE RIGHT FINISHING PIECE FOR EVERYONE

Content is everything

The V-MIX Plus comes standard with a welded-on anti-spill ring. This double-tubular construction keeps the feed from spilling over the edge of the hopper while being broken up and mixed. It further lends enormous stability to the mixing hopper. The anti-spill ring is also available in a raised version to create even more space for opening bales and for long-fiber material. Customers who prefer a more flexible anti-spill ring can opt for BvL's Vario ring. This patented anti-spill ring is suspended from chains. It "floats" on top of the mixed material and, among other things, keeps round bales from becoming jammed between mixing auger and anti-spill ring while they are being opened.

Vario volume ring for improved flexibility

To flexibly increase the hopper volume by approx. 30 cm, all mixer wagons with one or two mixing augers can be equipped with the Vario volume ring. This add-on offers a clever way to temporarily increase the height of the mixer wagon hopper, which is especially useful for keeping straw from spilling over when opening bales. Once the straw has been chopped, the edge of the hopper can be lowered again to restore the original overall height of the mixer.

[REDUCTION GEARBOX]

REDUCED STRAIN ON THE DRIVE AND SMOOTH MIXING

Matching drive

We offer different reduction gears in a bid to match the different sizes of the mixer wagons and the power of your tractor. They are operated by hand lever, Bowden cable or hydraulic power – depending on your personal preference. Heavy Duty and Powershift gearboxes top off this product selection for particularly demanding applications.

BvL's Powershift gearbox is a powershift transmission with an integral hydraulic clutch. This gearbox allows you to start up the mixer wagon in low gear and rev up to full mixing speed under load. This reduces the power required significantly – especially during startup – and eases the load on the entire drive train – from the tractor to the mixing auger –

to a tremendous degree. This gearbox is a particularly useful and economical addition to your V-MIX Plus mixer wagon if you need to mix large quantities of feed. The gearbox comes standard with all mixer wagons included in the V-MIX Giant series.

YOUR SELECTION OPTIONS

2-speed reduction gearbox i=1.3

Powershift reduction gearbox

2-speed reduction gearbox i=1.8

2-speed HD reduction gearbox i=1.8

[STAINLESS STEEL LINING]

FOR THE HIGHEST STANDARDS

For applications that are particularly demanding, we can also supply your mixer wagons with an all-around lining made of high-quality stainless steel V2A (1.4301). Offering exceptional resistance to acid and wear, this non-corrosive chrome-nickel steel provides outstanding protection when processing highly acidic feed components. Chrome makes the steel resistant to wear, while nickel adds corrosion resistance.

Depending on your requirements, you can choose to add this lining both as a Basic version (H= 300 mm; t= 2 mm) and as a Professional version (H= 750 mm; t= 3 mm). To satisfy even greater requirements, we can also implement V2A hard surfacing of the mixing auger.

YOUR SELECTION OPTIONS

V2A lining Basic (H=300 mm)

V2A lining Professional (H=750 mm)

[STRAW BLOWER]

FEEDING, MIXING AND BEDDING WITH JUST ONE MACHINE

Convenient in every way

Our straw blower V-COMFORT Turbo can be mounted at the front or the rear of almost any mixer wagon. Assuring fast processing and spreading of the straw, the mixer wagon is ideally suited for bedding tasks that need to be completed in the barn every day. Operating with the one-of-a-kind air flow principle, our straw blower provides for powerful ejection of the straw. The turbine wheel creates suction, pulling the straw directly into the blower before ejecting it with great force via the throwing blades. Patented by BvL, the straw bell, the drive and the mounting of the straw blower are guaranteed to deliver the performance characteristics listed below:

- Excellent performance thanks to the direct, no-belt flux of force of the drive train
- Throw distance up to 25 m
- Up to 320 kg of straw per minute
- Blanket or targeted spreading, depending on requirements
- High level of process reliability and continuous ejection
- Integrated stone trap for improved safety

COMFORT FOR YOUR ANIMAL

© AdobeStock - Lukas Guntler

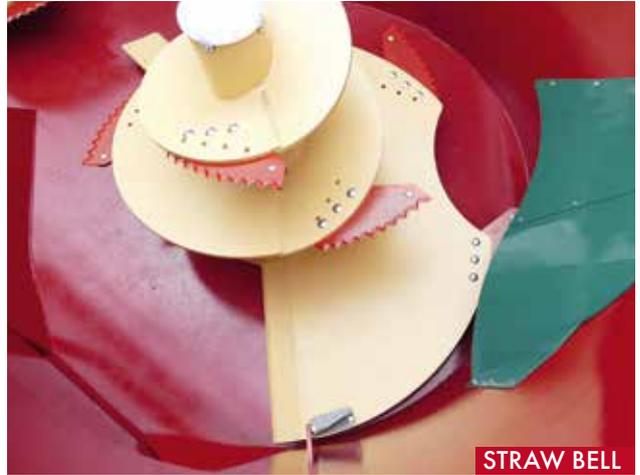

Improved animal comfort and enhanced animal performance hinge not least on the best possible bedding you can provide them. A cow enjoys lying down for extended periods if the lying surface offers the appropriate comfort. The greater its lying comfort, the better the conditions for the cow to produce milk. Choosing the right bedding implements is thus of paramount importance when it comes to reducing your daily workload and putting your business on the right track for the future.

Delivering an enormous amount of power, the BvL straw blower ensures that your straw will always be ejected continuously. Thanks to the targeted spreading with the straw blower, the bedding material is guaranteed to be distributed evenly across the surface. Affording you savings in bedding material of over 20%, this solution is exceptionally resource-efficient.

Additional information:

OUR EQUIPMENT OPTIONS

Water spraying unit for binding dust

Pairing the straw blower with a mixer wagon lets the user add water to the straw while the bales are being broken up. As the dust contained in the straw binds with water, the formation of dust is almost eliminated completely during spreading.

The stone trap extra for extra safety

The integrated stone trap provides additional protection of people, animals and equipment. Rocks and other materials falling out of the straw are caught and collected in the container.

Straw bell for an unhindered material flow

The straw bell integrated into the mixing hopper, combined with the asymmetrically arranged discharge opening for the straw blower, ensures an optimal flow of material. The straw is fed in a way that is controlled, continuous and process-reliable.

Softstart – hydraulic starting aid

To ensure the machine starts up gently, the straw blower is equipped with a hydraulic starting aid. The hydraulic motor is set into motion and accelerated by the impeller before the tractor's PTO shaft is switched on.

[V-CONNECT DAIRY FEEDER]

FEED MANAGEMENT WITH A SYSTEM

Digital solution for daily use

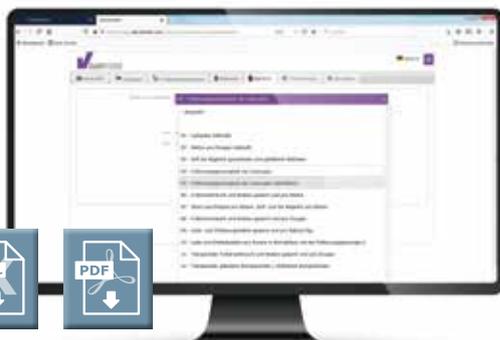

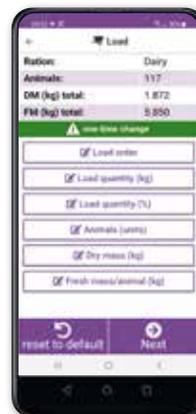

Our mobile feed management system V-DAIRY Feeder is your daily helper that will make your feeding process quick and easy. This solution can be combined with nearly every mixer wagon. All feeding data is stored long term in a database and in a way that is easy to comprehend, making it available to you whenever and wherever you are.

Our solution offers:

- Management of feed components and groups, recipe preparation
- Mixing time specification
- Comprehensive reports and evaluations (feeding accuracy, times, feed cost, FCE, IOFC, stock management etc.)
- Rights management for different users
- Interfaces with selected software
- Software updates, automatic synchronization, data storage and support
- and much more
